

[Question 1 (3 pts)] Explain, in your own words, the potential advantages of using Selenium during a web development project.

You could test all the possible buttons and combinations and inputs to see how the program reacts.

[Question 2 (3 pts)] Are there any potential drawbacks to using Selenium to develop web sites? Explain.

Yes, if you have a lot of combinations because you would have to set it up manually

[Question 3 (3 pts)] Write the HTML line for a test suite that links to a Selenium test case called MyCase and stored in the file myCase.html.

Open MyCase myCase.html

• [Question 4 (3 pts)] Write the HTML for a test case command click that takes one argument //a[@id='myLink']/.  
Click //a[@id='myLink']/

• [Question 5 (3 pts)] What are the benefits to using HTML for Selenium test cases? What, if any, are the drawbacks?

The benefits to using HTML for test cases is that it is very clean to read and doesn't need a lot of imports and I don't know enough to see any drawbacks at the moment other than there is not a standard set of test units like java
